

CloudHost Enterprise SLA - Meridian Contract (2024)

Service levels and credits

Compute and managed network: 99.95% monthly uptime. Block storage: 99.99% durability, 99.9% availability. Measured per calendar month, excluding scheduled maintenance announced 72 hours in advance through the status portal.

Service credits: below 99.95% earns 10% of the monthly fee, below 99.5% earns 25%, below 99.0% earns 50%. Credits must be claimed within 30 days of the incident month via the enterprise portal; they never auto-apply. Claims require the affected resource IDs and the UTC time window.

Meridian's uptime is measured at the load balancer, not per instance - single-instance failures inside an auto-healing group do not count against the SLA.

CloudHost Enterprise SLA - Meridian Contract (2024)

Support tiers and escalation

Meridian is on the Enterprise tier: Severity-1 tickets (production down) have a 15-minute response target, 24x7, with a named TAM. Severity-2 (production degraded): 1 hour. Severity-3 (non-production): next business day.

Escalation path: file the ticket first - phone escalation without a ticket number resets the clock. The TAM hotline may be used for SEV1 after 20 minutes without engineer contact. Reference this contract number in every ticket: MER-ENT-2024-0117.

During a declared CloudHost regional event, Meridian's on-call should pin the public status page incident ID to our internal incident channel; credits are computed against their published timeline, so our own timestamps matter (see: On-Call Escalation Policy).
